Overview

Note on this Documentation

This guide describes the two-step process needed to upgrade from a v1.x version to v2.4 Balaton and higher.

What Is New in v2.x?

Major UI Changes

Starting with v2.0 Como, you can choose from ten different components, each corresponding to a single SessionM functional area, to drag and drop onto your Lightning page.

▼ Custom - Managed (10)

-  SessionM Activity Timeline
-  SessionM Available Offers
-  SessionM Customer Profile
-  SessionM Expired Offers
-  SessionM Issued Offers
-  SessionM Notes
-  SessionM Points
-  SessionM Redeemed Offers
-  SessionM Reward Store
-  SessionM Tier Progress

This allows your users to access loyalty data in different areas of the page for a complete view of the customer, instead of having to toggle back and forth within a single SessionM pane.

The components can also be displayed only for specific users or based on certain record criteria – by simply using the built-in **Component Visibility** filter.

Sync to SessionM Automatically with Account/Contact Updates

Account or Contact updates can now be automatically sent to the SessionM Platform. Configure the new field mapping introduced in v2.1 Como and every Account/Contact update will automatically update the corresponding SessionM customer profile. Check the [admin guide](#) for more information.

Use Cases

Please check our [Salesforce Service Cloud Use Case](#) document for more details on how to manage SessionM loyalty data for a customer from Salesforce Service Cloud.

Upgrading from 1.x to 2.x

Before Upgrading

Testing

We advise that you test the upgrade first in a sandbox to make sure it works as you expect.

Backwards Compatibility

Please keep in mind that upgrading to another major version does not guarantee backwards compatibility with v1.x.

Data and Metadata

As per the [Salesforce documentation](#), the data and metadata are not deleted.

Data and metadata are never deleted in a subscriber org without specific action by the customer. When a subscriber upgrades to the new package version, the deleted components are still available in the subscriber's org. The components are displayed in the Unused Components section of the Package Details page. This section ensures that subscribers have the opportunity to export data and modify custom integrations involving those components before explicitly deleting them.

The customer profile is the only loyalty data stored in Salesforce by the SessionM managed package. The package versions 2.0 and higher bring significant changes to the schema – please read [Appendix A – Deprecated Metadata](#) for more information. However, a data migration is not needed; the SessionM platform is the source of truth for loyalty data and it can be refreshed in Salesforce anytime by using the Customer Profile component.

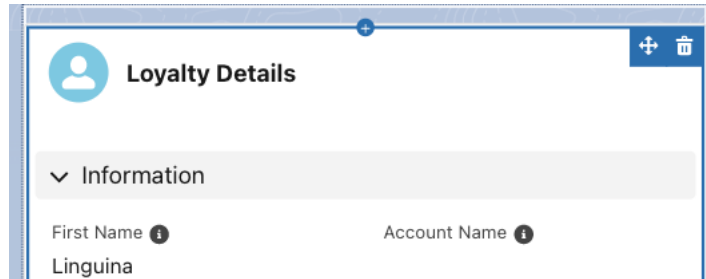

User Training

Given the major updates in the UI and configuration process of the managed package, please consider user training before rolling out the new changes.

Preliminary Step 1: Remove Component References

Please remove the *SessionMContainerCmp* component containing the single SessionM pane from all the pages.

1. Go to  **Edit Page**.
2. Click on the component that you want to remove and click the bin icon on the top right corner.

3. Click **Save**.

Preliminary Step 2: Check the Field Mapping

Starting with v2.0 Como, each field in the field mapping is validated before sending data to SessionM. Make sure the field mapping contains only fields that exist in your org.

For example, the default mapping in v1.x erroneously included an invalid field *smsfsc__SessionMUser__c.smsfsc__Purchases_Recency_Median_Days__c*. If this field is still part of the mapping, it needs to be removed.

Also, all the Customer Lifecycle Value fields need to be updated with *attributeType*: "customer_scores" (examples for *smApiName* are *spend_7*, *freq_7*, *spend_30*, *freq_30*, *spend_all*, *freq_all*, *recency_median*, *expected_clv*, *expected_clv_ptile*, *p_alive*)

1. Go to  **Setup**.
2. Go to the **Quick Find** box and search for "metadata". Select **Custom Metadata Types**.
3. Click **Manage Records** next to **SessionM Field Mappings**.

All Custom Metadata Types

[Help for this Page](#)

Custom metadata types enable you to create your own setup objects whose records are metadata rather than data. These are typically used to define application configurations that need to be migrated from one environment to another, or packaged and installed.

Rather than building apps from data records in custom objects or custom settings, you can create custom metadata types and add metadata records, with all the manageability that comes with metadata: package, deploy, and upgrade. Querying custom metadata records doesn't count against SOQL limits.

New Custom Metadata Type						
Action	Label	Namespace Prefix	Visibility	API Name	Record Size	Description
Del Manage Records	SessionM Cleanup Service	smfsc	Public	smfsc__SessionM_Data_Cleanup__mdt	154	Settings for auto deletion of SessionM custom object records.
Del Manage Records	SessionM Field Mapping	smfsc	Public	smfsc__SessionM_Json_Mappings__mdt	406	JSON field mappings to help sync the SessionM platform and SFSC.

4. Select **SessionM to Salesforce API Mapping** and click **Edit**.

The screenshot shows the 'SessionM JSON Mapping (Managed)' record in the Salesforce Setup interface. The record is titled 'SessionM to Salesforce API' and is in 'Managed' status. The 'Field Mappings JSON' field is expanded, showing a JSON array of mappings. The mappings are:

```
[{"fieldName": "session_id", "sfName": "smfsc__Purchases_Lifetime_c", "sfDataType": "Standard"}, {"fieldName": "req_id", "sfName": "smfsc__Purchases_Frequency_Lifetime_c", "sfDataType": "Standard"}, {"fieldName": "recency_median", "sfName": "smfsc__Purchases_Recency_Days_c", "sfDataType": "Standard"}, {"fieldName": "req_mediateq", "sfName": "smfsc__Purchases_Recency_Median_Days_c", "sfDataType": "Standard"}, {"fieldName": "suspended_cli", "sfName": "smfsc__CLV_c", "sfDataType": "Standard"}, {"fieldName": "suspended_cli_gpt", "sfName": "smfsc__CLV_Score_c", "sfDataType": "Standard"}, {"fieldName": "a_star", "sfName": "smfsc__Risk_Churn_c", "sfDataType": "Standard"}]
```

5. Click **Save**.

Step 1: Upgrade to v1.19 Mackinac

The first step requires an upgrade to an intermediary package version to remove obsolete metadata used for the single SessionM pane:

1. Open the v1.19 Mackinac installation URL and log into your org.
 - [Click here to install v1.19 Mackinac to a Sandbox](#)
 - [Click here to install v1.19 Mackinac to Production](#)
2. Select **Install for Admins Only**. This ensures that only System Administrators are provided access to the package during the installation. Click **Upgrade**.

The screenshot shows the Salesforce App Store interface for upgrading the 'SessionM Loyalty for Service Cloud' app. At the top, there is a green download icon and the text 'Upgrade SessionM Loyalty for Service Cloud By SessionM, Inc.'. Below this is an information banner: 'An earlier version is installed. It can be upgraded while preserving the existing data. Installed: Summer 19 Patch (1.16.1) New Version: Mackinac (1.19)'. There are three installation options: 'Install for Admins Only' (selected with a blue radio button), 'Install for All Users' (unselected), and 'Install for Specific Profiles...' (unselected). At the bottom right of the options are 'Upgrade' and 'Cancel' buttons. Below the options is a table with the following data:

App Name	Publisher	Version Name	Version Number
SessionM Loyalty for Service Cloud	SessionM, Inc.	Mackinac	1.19

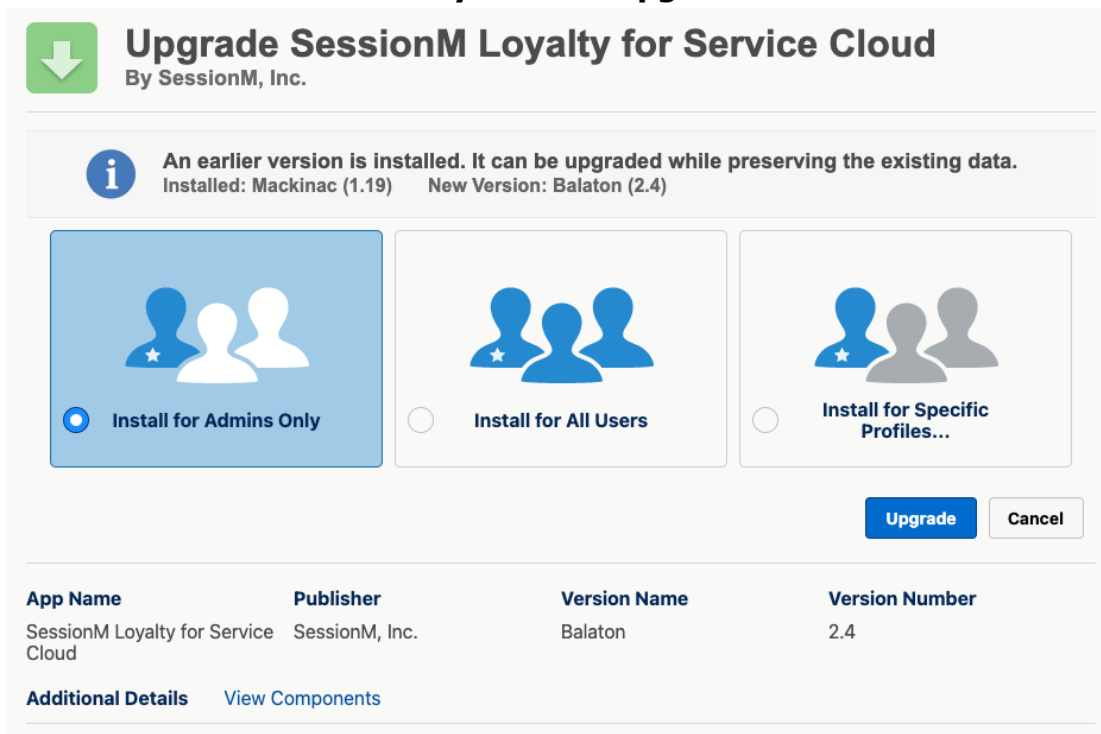

Below the table is a 'Description' section: 'Preliminary version between SessionM Loyalty for Service Cloud 2.0 and 1.x'. At the bottom left, there are links for 'Additional Details' and 'View Components'.

3. Click **Done** once the upgrade is complete. You will be redirected to the Installed Packages page. If the upgrade takes longer, you will receive an email after the upgrade has completed.

Step 2: Upgrade to v2.x

After the 1.x dependencies were removed in the previous step, you are ready to install the new version!

1. Visit [our AppExchange listing](#) to get the installation URL for the latest version. Log into your sandbox or production org.
2. Select **Install for Admins Only** and click **Upgrade**.

The screenshot shows the AppExchange upgrade interface for "Upgrade SessionM Loyalty for Service Cloud" by SessionM, Inc. It features a green download icon and a message: "An earlier version is installed. It can be upgraded while preserving the existing data. Installed: Mackinac (1.19) New Version: Balaton (2.4)". Below this, there are three installation options: "Install for Admins Only" (selected with a blue radio button), "Install for All Users" (unselected), and "Install for Specific Profiles..." (unselected). At the bottom right, there are "Upgrade" and "Cancel" buttons. Below the options is a table with the following data:

App Name	Publisher	Version Name	Version Number
SessionM Loyalty for Service Cloud	SessionM, Inc.	Balaton	2.4

Additional links include "Additional Details" and "View Components".

3. Click **Done** once the upgrade is complete. You will be redirected to the Installed Packages page. If the upgrade takes longer, you will receive an email after the upgrade has completed.
4. Read the [admin guide](#) to understand how to configure the package further.
5. You can now delete deprecated metadata if it's not used: [Appendix A – Deprecated Metadata](#).

Changes

Lightning Components

The single component that contained all the SessionM functionality in v1.x has been split into 10 different components, one for each functionality.

The 'Loyalty Details' component on the left contains the following sections:

- Information**: First Name (Lingui), Last Name (Nettlewater), Email (lin.nettlewater@example.com), Address (25 King's Avenue, Leeds, West Yorkshire, UNITED KINGDOM), Account Name (Nettlewater), Date of Birth (5/26/1985), Gender (u), Account Status (Good), Opted-in (checkbox), Suspended (checkbox), ZipCode (12346), Created At (6/24/2022, 12:30 AM), Updated At (8/12/2022, 12:20 AM).
- Customer Lifetime Value**: CLV, CLV Decile Score.
- Tiers**
- Points**

The ten new components on the right are:

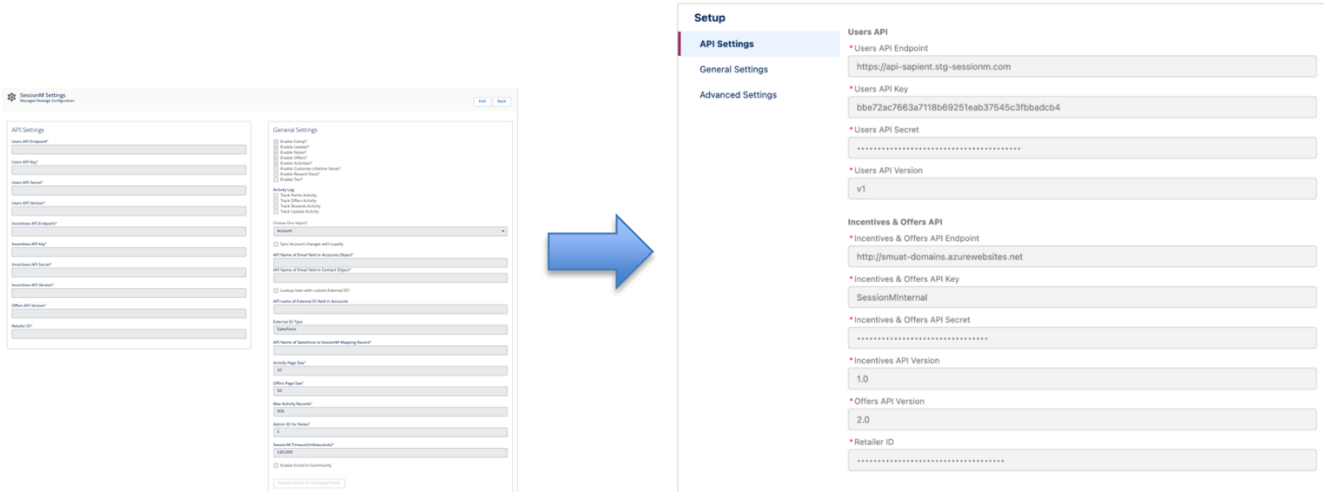

- Customer Loyalty Profile**: Information (First Name, Last Name, Email, Street Address, City, State, Country, Current State, Current Country, Created At, Updated At, custom date), Account Name, Date of Birth, Gender, Member Status, Opted-in, Suspended, ZIP Code.
- Tier Progress**: Current Tier Name, Tier Level, Tier Joined Date, Progress to Next Tier, User has achieved highest tier.
- Available Offers (100)**: Search bar, list of offers (e.g., \$5 off Check, [AA]Test Offer A3).
- Redeemed Offers (1)**: Search bar, list of redeemed offers.
- Issued Offers (4)**: Search bar, list of issued offers.
- Expired Offers (5)**: Search bar, list of expired offers.
- Activity Timeline (29)**: Filter dropdown, list of events (Redeemed Offer, Issued Offer).
- Reward Store**: Reward Points is not available.
- Notes (1)**: Reason: Location Not Supported, Testing new profile comments.
- Incentives Point Balance**: Table with columns: Account Name, Available Ba..., Life Time Va...

Account Name	Available Ba...	Life Time Va...
[DFACT] Loyal	0	0
[LISA] Point Account	0	0
[DFACT] Exclusive	0	0
Point Account 2 QA3	0	0
Tanya Point Account	0	0
Point Account QA3	0	0
[QA3] Point Account 2	0	0
[Andra] Point Account	0	0
[QA3] Point Account 1	0	0
[ESTest]ab maxime consequatur	0	0
[Andra] Point Account - Ex	0	0

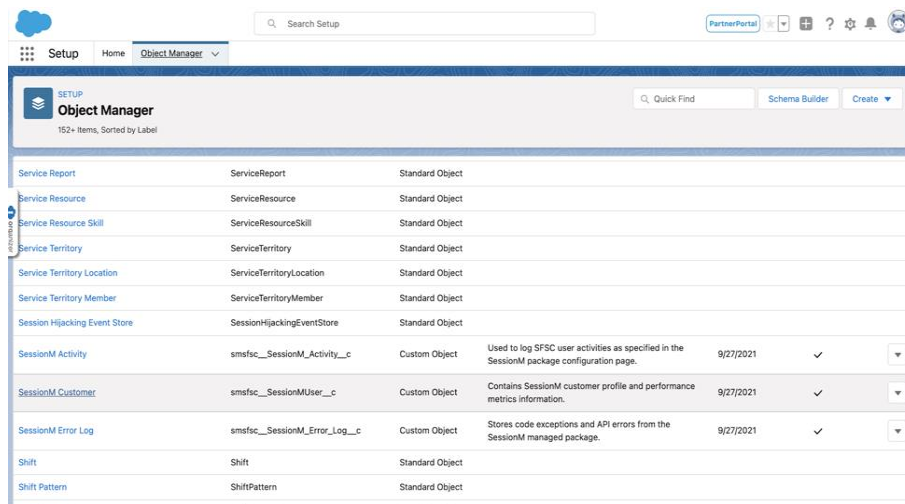

Refer to the [admin guide](#) for tips on how to embed these new components into the Lightning page layout.

Package Settings

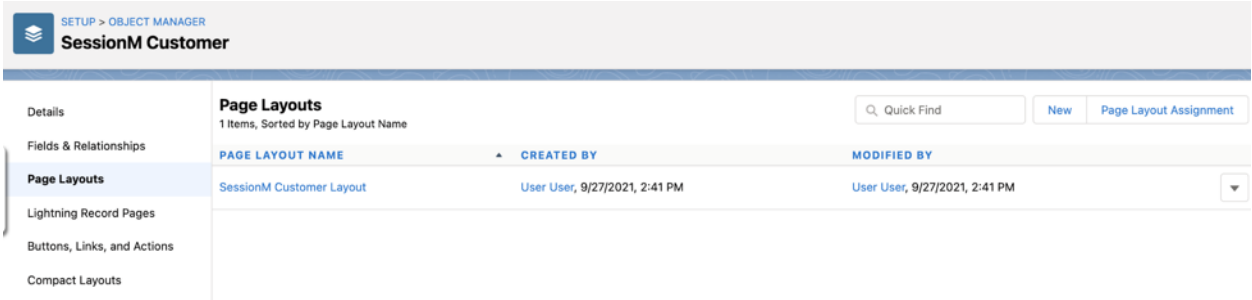

Many of the fields from the package configuration page have been moved at component level. Starting with v2.4 Balaton, this page also has a new UI.

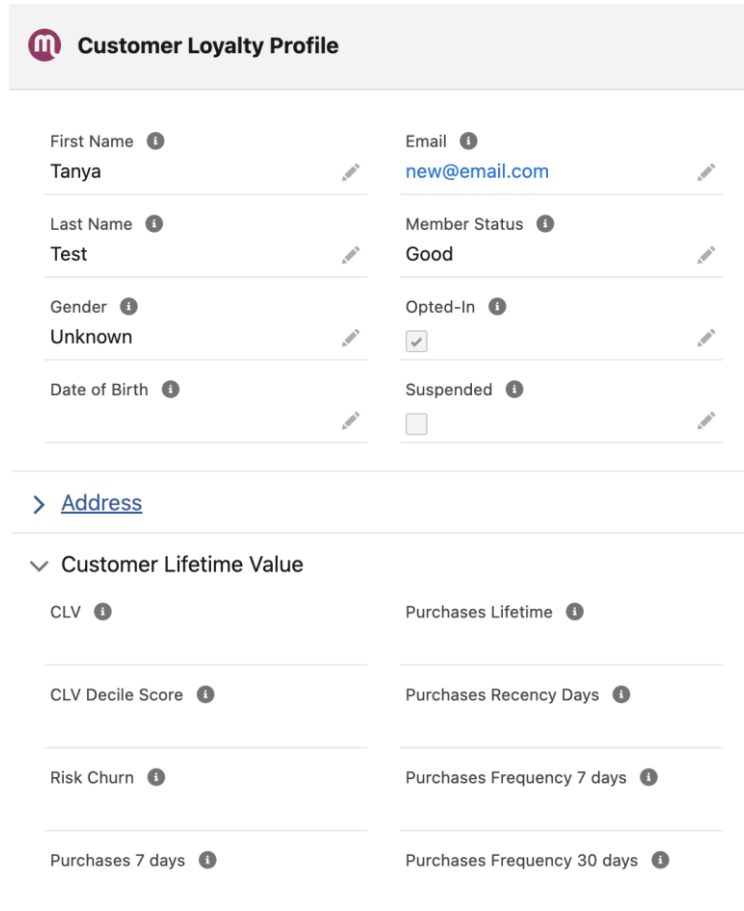

1. **Enable Notes?, Enable Offers?, Enable Activities?, Enable Reward Store?, and Enable Tier?** have been removed. To enable any of these functionalities, simply add the corresponding component to the page or use the **Component Visibility** filters to display them only for certain users or based on certain criteria.
2. **Enable Customer Lifetime Value?** has also been removed. To add CLV to the page, you need to add the corresponding fields (attribute type *customer_score* in the field mapping) to the SessionM Customer page layout.
 - a. Go to  Setup.
 - b. Click the **Object Manager** tab and select **SessionM Customer**.

c. Click **Page Layouts**. Then select **SessionM Customer Layout**.

d. Modify the page layout as needed. Then click **Save** to save and exit. Example of how the component loads when the page layout contains multiple sections:

3. **Enable Comp?** has been moved to the Points Balance component.
4. **Enable Update?** has been moved to the Customer Profile component.
5. **API Name of Email field in Accounts Object** and **API Name of Email field in Contacts Object** have been merged into **Email Field in Parent Object**. Only one parent object can be selected (Account or Contact).

6. **API Name of Salesforce to SessionM Mapping Record** has been removed. Check the [admin guide](#) on how to update the field mapping.
7. **Activity Page Size** and **Max Activity Records** have been moved to the Activity Timeline component.
8. **Offers Page Size** has been moved to the Available Offers, Issued Offers, Redeemed Offers, Expired Offers, and Reward Store components.
9. **Admin ID for Notes** has been moved to the Notes component.
10. **Enable Enroll In Community** has been removed. The components can be used in Experience Cloud (former Community Cloud) by default. Please refer to the [admin guide](#) for more information.
11. **Reason Codes for Comping Points** has been removed. The reasons list is fetched dynamically from SessionM for both the Notes and Points Balance components.

Appendix A – Deprecated Metadata

The following is a list of deprecated metadata. These can be deleted by the admin user once the upgrade has been completed.

Name	Parent Object	Type	Available in Versions
account	SessionM Transaction	Custom Field	1.1 - 1.19
account_name	SessionM User	Custom Field	1.1 - 1.19
accountloyaltyuser	SessionM User	Custom Field	1.15 - 1.19
addnote	SessionM Transaction	Custom Field	1.5 - 1.19
api_offers_endpoint	SessionM Protected Settings	Custom Field	1.5 - 1.19
